APS-10 Audible Pedestrian Signals

The APS-10 Audible Pedestrian Signal helps the visually handicapped, senior citizens and children cross intersections safely. Working in conjunction with existing pedestrian signals, it produces a separate and distinctive sound for both North/South and East/West crossings.

With its universal mount, the APS-10 is easily installed on any existing pedestrian signal.

Power is fed from the existing signal. Funds for audible pedestrian signals are available through the federal Community Development Block Grant (CDBG) program, which is distributed to cities and counties. City handicapped committees, such as the "Committee for Removal of Architectural Barriers" or "504 Committee", can petition cities and counties for these funds. State funds, such as California's "Bicycle Pathways" (Senate Bill 815 funds), may also be used to purchase audible pedestrian signals.

- Meets requirements of the Americans With Disabilities Act
- Government funding available
- Produces widely-used 'bird' sounds for easy recognition
- Field-proven 100% reliability
- Authorized by California and Canadian M.U.T.C.D.

Peek APS-10 Audible Pedestrian Signal

Outputs

"Cuckoo" - North/South. Electronic bird chirping by method of two (2) combined frequencies.

Duration0.6 seconds ± 20%

Frequency Base1,100 Hz ± 20%
